Biological Description

Description	Ald-Ph-PEG6-acid is a PEG-based linker for PROTACs that joins two essential ligands, crucial for forming PROTAC molecules, enabling selective protein degradation by leveraging the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two ligands linked together: one targets an E3 ubiquitin ligase and the other binds to the desired protein. They utilize the ubiquitin-proteasome system within cells to selectively degrade target proteins [1].
