Biological Description

Description	Ms-PEG10-t-butyl ester is a PEG-based linker used in PROTACs to connect two essential ligands, facilitating the formation of PROTAC molecules and enabling selective protein degradation through the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs, comprising two ligands linked together—one targeting an E3 ubiquitin ligase and the other the target protein—exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins [1].
