Biological Description

Description	Br-PEG4-THP is a PEG-based linker for PROTACs, joining two essential ligands crucial for forming PROTAC molecules. This linker enables selective protein degradation by leveraging the ubiquitin-proteasome system within cells.
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two ligands linked by a linker: one ligand targets an E3 ubiquitin ligase, while the other targets a specific protein, harnessing the intracellular ubiquitin-proteasome system to selectively degrade target proteins [1].
