Biological Description

Description	Azide-PEG-alcohol, a polyethylene glycol (PEG)-based PROTAC linker with a molecular weight of 2000, functions as a versatile option for the synthesis of PROTACs[1].
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs comprise two distinct ligands joined by a linker: one ligand targets an E3 ubiquitin ligase while the other targets a specific protein, utilizing the intracellular ubiquitin-proteasome system to selectively degrade the target proteins[1].
