Biological Description

Description	11(R)-HETE is biosynthesized by 11(R)-LOs of the sea urchin, <i>S. purpuratus</i> , and the fresh water hydra, <i>H. vulgaris</i> . The biological activity of 11(R)-HETE relates to oocyte maturation and tentacle regeneration, respectively, in these two species. 11(R)-HETE is also produced when aspirin-treated recombinant COX-2 is incubated with arachidonic acid. Stereochemical assignment of the (R) enantiomer is based on comparison of chiral HPLC retention times to published results.
