

Navtemadlin

Chemical Properties

CAS No. :	1352066-68-2
Formula:	C ₂₈ H ₃₅ Cl ₂ N ₂ O ₅ S
Molecular Weight:	568.55
Storage:	Powder: -20°C for 3 years Actual storage temperature shall be subject to the COA.

Biological Description

Description	Navtemadlin (AMG232) is a potent, selective and orally available inhibitor of p53-MDM2 interaction (IC ₅₀ : 0.6 nM). It binds to MDM2 with a K _d of 0.045 nM.
Targets(IC ₅₀)	Mdm2,E1/E2/E3 Enzyme,MDM-2/p53
In vitro	METHODS: Navtemadlin (0.1, 1, 10 μM) treated B16-F10 cells to determine whether reactivation of p53 by Navtemadlin would induce tumor growth arrest. RESULTS Navtemadlin induced significant p53-dependent growth arrest but minimal apoptosis in B16-F10 cells. [1]
In vivo	METHODS: Navtemadlin (AMG232)(20 mg/kg (ip)) was used to treat C57Bl/6 mice bearing B16-F10 melanoma tumors to observe whether it inhibited tumor growth in mice. RESULTS When Navtemadlin (AMG232) was administered daily starting from day 3, p53 tumor size was reduced by approximately 30%-50%. [1] METHODS: Navtemadlin (AMG232) (10, 25, 75 mg/kg, once daily, orally) was used to observe whether it could inhibit the growth of mouse tumor xenografts. RESULTS Navtemadlin (AMG232) activated p53 pathway activity in vivo and effectively inhibited the growth of mouse tumor xenografts. It also blocked DNA synthesis and induced apoptosis in vivo[2].
Cell Research	Cell Line: SJSA-1, HCT116, ACHN, NCI-H460, MOLM-13, RKO, MCF7, 22RV1, HT-29, PC-3, NCI-H82, NCI-SNU1, MG-63, NCI-H2452, SW982, C32, SK-HEP-1, A375, RT4, RPMI2650, MDA-MB-134-VI, NCI-H2347, and A427 cells. Concentration: 0-10 μM [1]. Incubation Time: 72 hours.
Animal Research	Animal Model: Female athymic nude mice (n=10) based cancer models. Dosage: 10, 25, 75 mg/kg. Administration: Once daily by oral gavage [1].

Solubility Information

Solubility	H ₂ O: Insoluble, DMSO: 150 mg/mL (263.83 mM),Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)

A DRUG SCREENING EXPERT

In vivo Formulation	10% DMSO+40% PEG300+5% Tween 80+45% Saline: 2 mg/mL (3.52 mM), Sonication is recommended. <i>Please add the solvents sequentially, clarifying the solution as much as possible before adding the next one. Dissolve by heating and/or sonication if necessary. Working solution is recommended to be prepared and used immediately. The formulation provided above is for reference purposes only. In vivo formulations may vary and should be modified based on specific experimental conditions.</i>

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	1.7589 mL	8.7943 mL	17.5886 mL
5 mM	0.3518 mL	1.7589 mL	3.5177 mL
10 mM	0.1759 mL	0.8794 mL	1.7589 mL
50 mM	0.0352 mL	0.1759 mL	0.3518 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Note: The dilution table applies only to solid products. For liquid products, please calculate the stock solution based on the stated concentration and/or density.
