Biological Description

Description	Fosmanogepix (APX001) is a first-in-class, orally available broad-spectrum antifungal agent. It acts as an N-phosphonoxy methyl prodrug that undergoes rapid and complete metabolism by systemic alkaline phosphatases. This metabolism leads to the formation of the active moiety, APX001A. Fosmanogepix (APX001), with its ability to target the highly conserved Gwt1 fungal enzyme, holds great potential for the development of treatments against invasive fungal infections.
