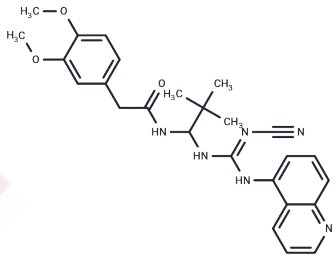
Data Sheet (Cat.No.T3690)

TargetMol

A-740003

Chemical Properties



CAS No. : 861393-28-4

Formula: C26H30N6O3

Molecular Weight: 474.55

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year
Actual storage temperature shall be subject to the COA.

Biological Description

Description	A-740003 (A 740003) is an effective and specific P2X7 receptor antagonist (IC50: 18/40 nM, for rat/human). It can reduce nociception in animal models of persistent neuropathic and inflammatory pain, and also reduce neuroblastoma tumor growth in mice.
Targets(IC50)	P2X Receptor
In vitro	A-438079 and A-740003 (10 μM) effectively inhibit the prolonged phase of BzATP-induced responses[1] and mitigate SE-induced TNF-α expression in dentate granule neurons while increasing SE-induced neuronal death[2]. Compared to other antagonists, both compounds exhibit superior efficacy in inhibiting P2X7 receptor activation across various species, with heightened activity in rat and human compared to mouse P2X7 receptors[3]. Specifically, A-740003 robustly inhibits agonist-induced IL-1β release (IC50=156 nM) and pore formation (IC50=92 nM) in differentiated human THP-1 cells[4].
In vivo	Administering A-740003 systemically results in a dose-dependent reduction of pain (antinociception) in rats, as evidenced in a spinal nerve ligation model (ED50=19 mg/kg i.p.), indicating its potency. Furthermore, A-740003 diminishes sensitivity to touch (tactile allodynia) in models of neuropathic pain, including chronic constriction of the sciatic nerve and vincristine-induced neuropathy. It also significantly lowers increased sensitivity to heat (thermal hyperalgesia) following the intraplantar introduction of carrageenan or complete Freund's adjuvant (ED50=38-54 mg/kg i.p.). However, A-740003 does not affect acute thermal pain in healthy rats and does not impair motor skills at doses that relieve pain.

Solubility Information

Solubility	DMSO: 9.5 mg/mL (20.02 mM),Sonication is recommended. (< 1 mg/ml refers to the product slightly soluble or insoluble)
In vivo Formulation	10% DMSO+40% PEG300+5% Tween 80+45% Saline: 1 mg/mL (2.11 mM),Sonication is recommended. *Please add the solvents sequentially, clarifying the solution as much as possible before adding the next one. Dissolve by heating and/or sonication if necessary. Working solution is recommended to be prepared and used immediately. The formulation provided above is for reference purposes only. In vivo formulations may vary and should be modified based on specific experimental conditions.*

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	2.1073 mL	10.5363 mL	21.0726 mL
5 mM	0.4215 mL	2.1073 mL	4.2145 mL
10 mM	0.2107 mL	1.0536 mL	2.1073 mL
50 mM	0.0421 mL	0.2107 mL	0.4215 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Note: The dilution table applies only to solid products. For liquid products, please calculate the stock solution based on the stated concentration and/or density.
