Biological Description

Description	m-PEG-acrylate (MW 30000) is a polyethylene glycol (PEG)-based bifunctional linker commonly used in the chemical synthesis of proteolysis targeting chimeras (PROTACs) [1].
Targets(IC50)	Others,PROTAC Linker
In vitro	PROTACs consist of two ligands linked by a connector: one binds to an E3 ubiquitin ligase, and the other binds to the target protein. They harness the intracellular ubiquitin-proteasome system to selectively degrade target proteins [1].
