## Biological Description

Description	Sekikaic acid is a phenolic lichen metabolite that has been found in <i>H. obscurata</i> and has diverse biological activities. It scavenges superoxide and DPPH radicals in cell-free assays when used at a concentration of 0.5 $\mu$ M. Sekikaic acid is active against the rg recombinant strain of respiratory syncytial virus (RSV; IC <sub>50</sub> = 5.69 $\mu$ g/ml). It inhibits the protein-protein interaction between mixed lineage leukemia 1 (MLL1) and the GACKIX domain of CREB-binding protein (CBP; IC <sub>50</sub> = 34 $\mu$ M).
Targets(IC50)	Others, Glucosidase, Amylase, glycosidase
