Biological Description

Description	Epifriedelanol exhibits antibacterial activities. It also can reduce cellular senescence in human primary cells and may be used to develop dietary supplements or cosmetics that modulate tissue aging or aging-associated diseases. Epifriedelanol and friedelin possess promising antioxidant activity, and they are active against the two cancer cells (human T4 lymphoblastoid (CEM-SS) and human cervical (HeLa) cancer cells) with IC50 values ranging from 3.54 to 11.45 ug/ml.
