## 4. FIRST-AID MEASURES

### 4.1 Description of necessary first-aid measures

#### General advice

no data available

#### If inhaled

Move the victim into fresh air. If breathing is difficult, give oxygen. If not breathing, give artificial respiration and consult a doctor immediately. Do not use mouth to mouth resuscitation if the victim ingested or inhaled the chemical.

#### Following skin contact

Take off contaminated clothing immediately. Wash off with soap and plenty of water. Consult a doctor.

#### Following eye contact

Rinse with pure water for at least 15 minutes. Consult a doctor.

#### Following ingestion

Rinse mouth with water. Do not induce vomiting. Never give anything by mouth to an unconscious person. Call a doctor or Poison Control Center immediately.

### 4.2 Most important symptoms/effects, acute and delayed

Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR if necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Poisons A and B

### 4.3 Indication of immediate medical attention and special treatment needed, if necessary

**SYMPTOMS:** Symptoms of exposure to this compound may include irritation. **ACUTE/CHRONIC HAZARDS:** This compound is highly toxic by inhalation, ingestion or skin absorption (is readily absorbed). It may cause irritation. When heated to decomposition it emits acrid smoke and toxic fumes of carbon monoxide and carbon dioxide. (NTP, 1992)

### **12.2 Persistence and degradability**

AEROBIC: L-Carvone, present at 100 mg/L, reached 90% biodegradation in 4 weeks using an activated sludge inoculum in the Manometric Respirometry test and was determined to be readily biodegradable(1). /L-Carvone/[(1) ECHA; Registered Substances. L-p-mentha-1

### **12.3 Bioaccumulative potential**

An estimated BCF of 30 was calculated in fish for carvone(SRC), using an estimated log Kow of 3.07(1) and a regression-derived equation (1). According to a classification scheme(2), this BCF suggests the potential for bioconcentration in aquatic organisms is moderate(SRC).

### **12.4 Mobility in soil**

Using a structure estimation method based on molecular connectivity indices(1), the Koc of carvone can be estimated to be 140(SRC). According to a classification scheme(2), this estimated Koc value suggests that carvone is expected to have high mobility in soil.
