4.1 Description of necessary first-aid measures

General advice

no data available

If inhaled

Move the victim into fresh air. If breathing is difficult, give oxygen. If not breathing, give artificial respiration and consult a doctor immediately. Do not use mouth to mouth resuscitation if the victim ingested or inhaled the chemical.

Following skin contact

Take off contaminated clothing immediately. Wash off with soap and plenty of water. Consult a doctor.

Following eye contact

Rinse with pure water for at least 15 minutes. Consult a doctor.

Following ingestion

Rinse mouth with water. Do not induce vomiting. Never give anything by mouth to an unconscious person. Call a doctor or Poison Control Center immediately.

4.2 Most important symptoms/effects, acute and delayed

1. establish clear airway by aspiration of secretions. admin oxygen by mechanically assisted pulmonary ventilation. improve tissue oxygenation as much as possible before admin atropine to minimize risk of ventricular fibrillation. 2. admin atropine sulfate iv, or im if iv injection is not possible. ... in moderately severe poisoning: adult dosage, incl children over 12 yr: 0.4-2.0 mg repeated every 15-30 min until atropinization ... achieved: tachycardia (pulse of 140/min), flushing, dry mouth, dilated pupils). maintain atropinization by repeated doses for 2-12 hr or longer depending on severity of poisoning. organophosphate pesticides

6.3 Methods and materials for containment and cleaning up

Collect and arrange disposal. Keep the chemical in suitable and closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment. Adhered or collected material should be promptly disposed of, in accordance with appropriate laws and regulations.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling

Handling in a well ventilated place. Wear suitable protective clothing. Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Use non-sparking tools. Prevent fire caused by electrostatic discharge steam.

7.2 Conditions for safe storage, including any incompatibilities

Store the container tightly closed in a dry, cool and well-ventilated place. Store apart from foodstuff containers or incompatible materials.

12.3 Bioaccumulative potential

Based upon a reported water solubility of 40 mg/L(1), the BCF for etrimfos can be estimated to be 77 from a recommended regression-derived equation(2,SRC). This BCF value suggests that bioconcentration in aquatic organisms is not important(SRC).

12.4 Mobility in soil

Based upon a reported water solubility of 40 mg/L at 23 deg C(1), the Koc for etrimfos can be estimated to be about 570 from a regression-derived equation(2,SRC). Using a structure estimation method based on molecular connectivity indexes, the Koc for etrimfos can be estimated to be 202(3,SRC). According to a suggested classification scheme(4), these estimated Koc values suggest that etrimfos has medium to low mobility in soil(SRC). Following an accidental spill of etrimfos into the Rhine River in Switzerland (estimated discharge of 290-1800 kg), monitoring suggested that etrimfos did not strongly adsorb in sediment and particles in the water(4).

12.5 Other adverse effects

no data available

13. DISPOSAL CONSIDERATIONS

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
