6.1 Personal precautions, protective equipment and emergency procedures

Avoid dust formation. Avoid breathing mist, gas or vapours. Avoid contacting with skin and eye. Use personal protective equipment. Wear chemical impermeable gloves. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak.

6.2 Environmental precautions

Prevent further spillage or leakage if it is safe to do so. Do not let the chemical enter drains. Discharge into the environment must be avoided.

6.3 Methods and materials for containment and cleaning up

Collect and arrange disposal. Keep the chemical in suitable and closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment. Adhered or collected material should be promptly disposed of, in accordance with appropriate laws and regulations.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling

Handling in a well ventilated place. Wear suitable protective clothing. Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Use non-sparking tools. Prevent fire caused by electrostatic discharge steam.

7.2 Conditions for safe storage, including any incompatibilities

Store the container tightly closed in a dry, cool and well-ventilated place. Store apart from foodstuff containers or incompatible materials.

Toxicity to algae: no data available

Toxicity to microorganisms: no data available

12.2 Persistence and degradability

A lab-scale, upflow aerated column receiving water that had first passed through a soil sample, obtained from a former asphalt production plant, (3-ethylphenol influent initially at 73 ug/L) was capable of 93% removal of this compound within 37 days(1). An on-site (at the production plant) upflow aerated column and trickling filter, after 38 days of operation, removed 86% and 22% of the initial concentration of p-ethylphenol, respectively(1). Differences between lab scale and on-site reactors were due to differences in the hydraulic load(1). Pseudomonas strain FH23, isolated by enrichment culture with 4-hydroxybiphenyl, had a oxygen uptake rate of 9 nmol/min/mg protein when grown with 3-ethylphenol as the sole carbon source(2).

12.3 Bioaccumulative potential

An estimated BCF value of 40 was calculated for 3-ethylphenol(SRC), using a measured log Kow of 2.40(1) and a recommended regression-derived equation(2). According to a recommended classification scheme(3), this BCF value suggests that bioconcentration in aquatic organisms may be an important fate process(SRC).

12.4 Mobility in soil

The Koc of 3-ethylphenol is estimated as approximately 480(SRC), using a measured log Kow of 2.40(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this estimated Koc value suggests that 3-ethylphenol has moderate mobility in soil(SRC).

12.5 Other adverse effects

13. DISPOSAL CONSIDERATIONS

13.1 Disposal methods

Product

A DRUG SCREENING EXPERT

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
