Toxicity to microorganisms: EC50 - activated sludge of a predominantly domestic sewage - > 1 000 mg/L - 3 h. Remarks:Respiration rate.

### 12.2 Persistence and degradability

Based upon a group contribution method for predicting the probability and rate of aerobic biodegradation(1), dimethyl succinate has been estimated to be highly biodegraded with complete biodegradation occurring over a period of weeks(SRC).

### 12.3 Bioaccumulative potential

An estimated BCF value of 1.1 was calculated for dimethyl succinate(SRC), using a measured log Kow of 0.35(1) and a recommended regression-derived equation(2). According to a classification scheme(3), this BCF value suggests that bioconcentration in aquatic organisms is low(SRC).

### 12.4 Mobility in soil

The Koc of dimethyl succinate is estimated as approximately 37(SRC), using a measured log Kow of 0.35(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this estimated Koc value suggests that dimethyl succinate is expected to have very high mobility in soil(SRC).

### 12.5 Other adverse effects

no data available

## 13. DISPOSAL CONSIDERATIONS

### 13.1 Disposal methods

#### Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
