

AS-604850

Chemical Properties

CAS No. : T22587
Formula: C₁₁H₅F₂NO₄S
Molecular Weight: 285.22
Appearance: no data available
Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 years

Biological Description

Description	AS-604850 is a selective and ATP-competitive PI3K γ inhibitor (IC ₅₀ = 2.5 μ M). It has over 30-fold selectivity for PI3K δ and PI3K β , and 18-fold selectivity over PI3K α .
Targets(IC ₅₀)	Others
In vitro	AS-604850 pretreatment abolished GDCD-induced phosphorylation of Akt by 50% and inhibited apoptosis by reducing GDCD/TCDC/TLC-induced caspase-3 cleavage in rat hepatocytes. In PI3KCG-/-monocytes and THP-1 (human monocytic cell line), AS-604850 inhibited the PKB phosphorylation activated by MCP-1, it also blocked the MCP-1-mediated chemotaxis in a concentration-dependent manner. In RAW264 mouse macrophages, C5a-mediated PKB phosphorylation was inhibited by AS-604850 [1][2].
In vivo	In the thioglycollate-induced peritonitis model that induced multiple chemokines in vivo, oral administration of 10 mg/kg AS-604850 showed a 31% decrease in neutrophil recruitment [1].

Solubility Information

Solubility	DMSO: Soluble, (< 1 mg/ml refers to the product slightly soluble or insoluble)
