Biological Description

Description	Rosiglitazone maleate (BRL 49653) is the maleate salt of rosiglitazone, an orally-active thiazolidinedione with antidiabetic properties and potential antineoplastic activity.
Targets(IC50)	Ferroptosis, TRP/TRPV Channel, PPAR, Autophagy
In vivo	In numerous cell lines, Rosiglitazone has been found to inhibit cholesterol synthesis. It activates the AMP-activated protein kinase (AMPK) complex, which includes the α 1 and α 2 subunits within the AMPK α subunit, leading to an increase in phosphorylation.
