# Data Sheet (Cat.No.T22136)

#### PRL-3 Inhibitor I

#### **Chemical Properties**

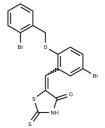

CAS No.: 893449-38-2

Formula: C17H11Br2NO2S2

Molecular Weight: 485.21

Appearance: no data available

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

## **Biological Description**

| Description   | PRL-3 Inhibitor I (BR-1) is a phosphatase of regenerating liver 3 (PRL-3) inhibitor which blocks the migration and invasion of metastatic cancer cells.                                                                                                                                                                                                                                                                                                                                       |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Targets(IC50) | Phosphatase,Others                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| In vitro      | PRL-3 inhibitor, in a dose-dependent fashion, blocked the dephosphorylation of DiFMUP by PRL-3 and strongly suppressed the activity of PRL-3 phosphatase in PRL-3 overexpressing DLD-1 colon tumor cells [DLD-1 (PRL-3)]. Also, PRL-3 inhibitor dose-dependently blocked the migration of DLD-1 (PRL-3) cells, however, it did not inhibit the proliferation of DLD-1 (PRL-3) cells, suggesting that PRL-3 inhibitor significantly blocked cell immigration and invasion without cytotoxicity |

### **Solubility Information**

| Solubility | DMSO: 55 mg/mL (113.35 mM),                                     | L |
|------------|-----------------------------------------------------------------|---|
|            | (< 1 mg/ml refers to the product slightly soluble or insoluble) |   |
|            |                                                                 | 1 |

#### **Preparing Stock Solutions**

|       | 1mg       | 5mg        | 10mg       |  |
|-------|-----------|------------|------------|--|
| 1 mM  | 2.061 mL  | 10.3048 mL | 20.6096 mL |  |
| 5 mM  | 0.4122 mL | 2.061 mL   | 4.1219 mL  |  |
| 10 mM | 0.2061 mL | 1.0305 mL  | 2.061 mL   |  |
| 50 mM | 0.0412 mL | 0.2061 mL  | 0.4122 mL  |  |

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.
