

Ximoprofen

Chemical Properties

CAS No. :	56187-89-4
Formula:	C ₁₅ H ₁₉ NO ₃
Molecular Weight:	261.32
Appearance:	no data available
Storage:	Powder: -20°C for 3 years In solvent: -80°C for 1 year

Biological Description

Description	Ximoprofen is a novel anti-inflammatory compound for the study of spondylitis.
Targets(IC50)	Others
In vivo	The aim of the study was to evaluate the efficacy of different daily dosages of Ximoprofen in patients with active ankylosing spondylitis. For 2 weeks 5 parallel groups were studied: placebo and Ximoprofen at 5, 10, 20, and 30 mg daily. Response to treatment was defined as an improvement in pain (VAS 100 mm) of at least 50% during the study. At the end of the study, the percentage of responders was higher in the Ximoprofen groups (54%, 41%, 53%, 56% in the 5, 10, 20, and 30 mg groups, respectively) than in the placebo group (21%). The clearest dose-related effect of Ximoprofen observed occurred after one week of treatment. This study 1/ confirms the efficacy of Ximoprofen at a 30 mg daily dosage, 2/ shows the persistence of this efficacy at lower dosages, 3/ suggests that ankylosing spondylitis is a sensitive and relevant human model to assess NSAIDs at an early stage of clinical evaluation.[1]

Solubility Information

Solubility	DMSO: 50 mg/mL (191.34 mM) (< 1 mg/ml refers to the product slightly soluble or insoluble)
