Biological Description

Description	Antibiotic PF 1052 is a fungal metabolite originally isolated from Phoma. ^{1,2} It is active against <i>S. aureus</i> , <i>S. parvulus</i> , and <i>C. perfringens</i> (MICs = 3.13, 0.78, and 0.39 µg/ml, respectively), among others. ¹ It inhibits neutrophil migration in a wound assay using zebrafish larvae expressing GFP-labeled neutrophils, reducing pseudopodia formation and inducing rounding of neutrophils. ² Antibiotic PF 1052 is selective for neutrophil migration over macrophage migration in zebrafish larvae. It also inhibits the migration of murine neutrophils when used at concentrations of 10 and 20 µM.
