

Balsalazide sodium hydrate

Chemical Properties

CAS No. :	150399-21-6
Formula:	C ₁₇ H ₁₇ N ₃ Na ₂ O ₈
Molecular Weight:	437.31
Appearance:	no data available
Storage:	Powder: -20°C for 3 years In solvent: -80°C for 1 year

Biological Description

Description	Balsalazide sodium hydrate (Balsalazide disodium) is an anti-inflammatory compound used in the treatment of Inflammatory Bowel Disease. Balsalazide sodium hydrate is a new 5-aminosalicylic acid (5-ASA) containing prodrug. High dose Balsalazide sodium hydrate (3.0 g twice daily) was superior in maintaining remission in patients with ulcerative colitis compared with a low dose (1.5 g twice daily) or a standard dose of mesalazine (0.5 g three times daily). All three treatments were safe and well tolerated [1]. Balsalazide sodium hydrate is approved for the treatment of mild-to-moderate active UC. It is efficacious for the induction of remission in mild to moderate UC and has a favorable safety profile, with the added advantages of greater efficacy of remission induction and rapidity of onset [2].
Targets(IC50)	STAT, Interleukin

Solubility Information

Solubility	DMSO: 50 mg/mL (114.34 mM), H ₂ O: 198.9 mM, (< 1 mg/mL refers to the product slightly soluble or insoluble)
------------	--

Preparing Stock Solutions

	1mg	5mg	10mg
1 mM	2.2867 mL	11.4335 mL	22.8671 mL
5 mM	0.4573 mL	2.2867 mL	4.5734 mL
10 mM	0.2287 mL	1.1434 mL	2.2867 mL
50 mM	0.0457 mL	0.2287 mL	0.4573 mL

Please select the appropriate solvent to prepare the stock solution, according to the solubility of the product in different solvents. Please use it as soon as possible.

Reference

Kruis W, et al. Low dose balsalazide (1.5 g twice daily) and mesalazine (0.5 g three times daily) maintained remission of ulcerative colitis but high dose balsalazide (3.0 g twice daily) was superior in preventing relapses.
