Biological Description

Description	YH239-EE, the ethyl ester of YH239, is a potent p53-MDM2 antagonist and an apoptosis inducer.
Targets(IC50)	Apoptosis,E1/E2/E3 Enzyme
In vitro	YH239-EE inhibits the growth of OCI-AML-3 cells with wild type p53 by inhibiting the p53-MDM2 interaction. YH239-EE induces cell cycle arrest and causes potent cell apoptosis via activation of p53 and downstream targets in four AML cells (OCI-AML-3 and MOLM-13 with wt p53, NB4 with p53 mutation, and HL60 with p53 deletion). [1]
Cell Research	Cell lines are harvested in log-phase growth and seeded following exposure to p53-MDM2 antagonists. Cell number and viability are determined by staining cells with Trypan blue 0.4% and counted with Countess slides.(Only for Reference)
