

GABAA receptor agonist 2

Chemical Properties

CAS No. :

Formula: C22H36O5

Molecular Weight: 380.52

Appearance: no data available

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Biological Description

Description	GABAA receptor agonist 2 (compound 4c) is a highly potent GABAA receptor agonist which exhibits anti-depressive properties in classical mouse models of depression, such as the FST and TST. By binding to the GABA binding site on the GABAA receptor, GABAA receptor agonist 2 produces GABAergic effects. Notably, Compound 4c holds promise for depression research [1].
