Biological Description

Description	Zn(BQTC) is a potent inhibitor of both mitochondrial DNA (mtDNA) and nuclear DNA (nDNA), causing significant damage that disrupts mitochondrial and nuclear functions sequentially. It facilitates apoptotic signaling pathways triggered by DNA damage and exhibits selective antiproliferative effects on A549R cells, rendering it useful for anticancer research [1].
Targets(IC50)	DNA/RNA Synthesis
In vitro	Zn(BQTC) (0-100 μ M; 6 hours) demonstrates potent and selective antiproliferative effects on A549R cells, with an IC50 value of 10 nM [1].
