Biological Description

Description	19 alpha-Hydroxyasiatic acid shows significant anticoagulant effect on the extrinsic pathway.
Targets(IC50)	Others
In vitro	Phytochemical examination of the ethyl acetate extract of the fruit yielded eight compounds of the 19- α -hydroxyursane type: euscaphic acid (1), 1- β -hydroxyeuscaphic acid (2), hyptatic acid B (3), 19 alpha-Hydroxyasiatic acid(4), trachelosperogenin (5), 4-epi-nigaichigoside F1 (6), nigaichigoside F1 (7), and trachelosperoside B-1 (8), as confirmed by NMR spectroscopy. Inhibition of cell proliferation by these compounds were determined by using MCF-7 (breast), SF-268 (CNS), NCI H460 (lung), HCT-116 (colon) and AGS (gastric) human tumour cells. Among the human tumour cell lines assayed, only compounds 3 and 6 displayed significant growth inhibition and was specific to colon tumour cells by 56% and 40%, respectively. These ursolic acid analogues were also tested for anti-inflammatory activity using in vitro cyclooxygenase-1 (COX-1) and cyclooxygenase-2 (COX-2) enzyme inhibitory assays[1]
