Biological Description

Description	Moringin is an isothiocyanate obtained from myrosinase-mediated hydrolysis of the glucosinolate precursor glucoMoringin present in Moringa oleifera seeds. Moringin has anti-inflammatory and antioxidative properties.
Targets(IC50)	gp120/CD4,IL Receptor,BCL,GSK-3,TNF,Wnt/beta-catenin,Caspase,COX,Nrf2,PPAR,p53
In vitro	Moringin modulates neuroinflammation via the β -catenin-PPAR γ axis and activates Wnt canonical pathway by inhibiting GSK3 β in a mouse model of experimental autoimmune encephalomyelitis. Moringin is effective in inducing apoptosis through p53 and Bax activation and Bcl-2 inhibition. Moringin demonstrates the antitumor efficacy in human malignant astrocytoma cells. The combination of Cannabidiol (5 μ M) and Moringin (5 μ M) has anti-inflammatory, antioxidative, and anti-apoptotic effects[1].
